EDUCATION

Diploma in Computer Programming and Co-op, GPA: 3.3 / 4.0

Expected Graduation – Dec 2026

Relevant Coursework: Object Oriented Programming, Website Development, Data Structures & Algorithms, Networking, Mobile & Pervasive Computing

Bachelor of Architectural Design, GPA: 3.4 / 4.0

Jan 2023 – Sep 2024

Relevant Coursework: 3D Modeling, 2D Modeling, Visual Design, UX/UI Design

TECHNICAL SKILLS

Programming Languages: Java, JavaScript, TypeScript, C++, HTML, CSS, C#, PHP, Python

Data & Databases: SQL (MySQL, SQL Server Management Studio, PostgreSQL), Data Modeling, Data Validation & Cleaning

Frameworks & Methodologies: ReactJS, ASP.NET, Git, GitHub, Azure Cloud, Project Management

Engineering: AutoCAD, SketchUp Pro

Additional Tools: Adobe Creative Suite, MS Office 365, Cisco, Figma, Affinity

HACKATHONS & AWARDS

AutoHack 2.0 – Second Place

March 6,7 Georgian College, Barrie, Ontario

UX Lead – Team Ctrl Alt Elite | C++, Arduino, PostgreSQL, scikit-learn, Groq API, Llama 3.3-70b

- Defined data requirements and led system architecture for Honda EQM, a predictive equipment failure monitoring system that turns raw sensor data into actionable maintenance insights.
- Engineered Arduino firmware with DS18B20 temperature and MPU-6050 vibration sensors to capture and structure real-time machine health data for downstream analysis.
- Built the end-to-end data pipeline from sensor input through a scikit-learn anomaly detection model to natural-language alerts via Llama 3.3-70b, making predictive insights accessible to non-technical stakeholders.
- Coordinated a cross-functional team across firmware, data/ML, and UI tracks under a 24-hour deadline, delivering a fully functional prototype.

WORK EXPERIENCES

Tiger White Group

Feb 2023 – Jan 2024 Phnom Penh, Cambodia

UX/UI Designer | HTML, CSS, JS, ReactJS, Figma

- Designed 50+ marketing materials, product packages, and digital graphics aligned with brand identity.
- Gathered requirements from 5+ cross-functional stakeholders and translated brand and business needs into deliverable specs across 10+ digital projects, improving customer engagement and visual consistency.
- Delivered 30+ creative assets through an organized workflow, ensuring consistent quality and on-time completion.

PROJECTS

Honda EQM – Predictive Equipment Monitoring

March 6,7, 2026, Barrie, Ontario

C++, Arduino, PostgreSQL, scikit-learn, Groq API

- Designed the sensor-to-insight data pipeline (Arduino → PostgreSQL → scikit-learn anomaly detection → Llama 3.3-70b), converting raw sensor readings into natural-language maintenance alerts.
- Structured and validated real-time temperature and vibration sensor data in PostgreSQL to support anomaly detection modeling.
- Reduced manual inspection overhead by translating model output into plain-language alerts for non-technical operators; won 2nd place at AutoHack 2.0.

RAYM Sneaker Store – School Project

Nov 2025 – Dec 2025

PHP, CSS, MySQL, Railway, Render

- Designed a relational schema for a 20+ item CRUD ordering system, applying data modeling principles to structure product, order, and inventory data in MySQL.
- Built data validation logic across the browse, order, and edit workflows, achieving 100% data accuracy across all CRUD operations.
- Developed admin-facing inventory and pricing management, improving backend data workflow efficiency for stock decisions.

KromTrip – Personal Product

React, Vite, JavaScript, CSS, Vercel

- Designed and built a travel planning web app end to end, featuring user authentication so users can sign in, create accounts, and manage trips from a single dashboard.
- Implemented trip creation, editing, and itinerary organization with state persisted through localStorage for a seamless return experience.
- Developed a responsive, component-based UI with a clean flow from sign-in to planning, optimized for fast load times.
